DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of (group I, the needle) and Species III in the reply filed on 5/18/04 is acknowledged. The traversal is on the ground(s) that the product of Group I cannot be used with another materially different process, and therefore restriction of Group I and Group III is improper and should be withdrawn. This is not found persuasive because in the process of using the product such as administering an anti-tumor drug to an internal portion of the body through a device that is implantable does not require the (needle) of applicant to pierce the skin. Applicant has clearly supported the examiner assertions on page 2 of his response.

Claims 10-39 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 5/18/04.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Palasis et al U.S.

Pat. No. 6,319,230. -

Art Unit: 3763

Palasis discloses a needle comprising: a shaft having a wall defining a longitudinally extending bore (fig. 5), a first end that is open to receive a substance in the bore, a second end adapted to penetrate skin of a subject, and a penetration length of less than about 4.5 mm (fig. 5); and at one side port extending through the wall and communication with the bore (fig. 5); as to claims 2-9, (figs. 2 and 5).
